

# Project 1

## The Four Five Loopers

Irakli Eradze • JR Li • Rances Rodriguez • Joseph Serrato • Xavier Teo

February 1, 2023

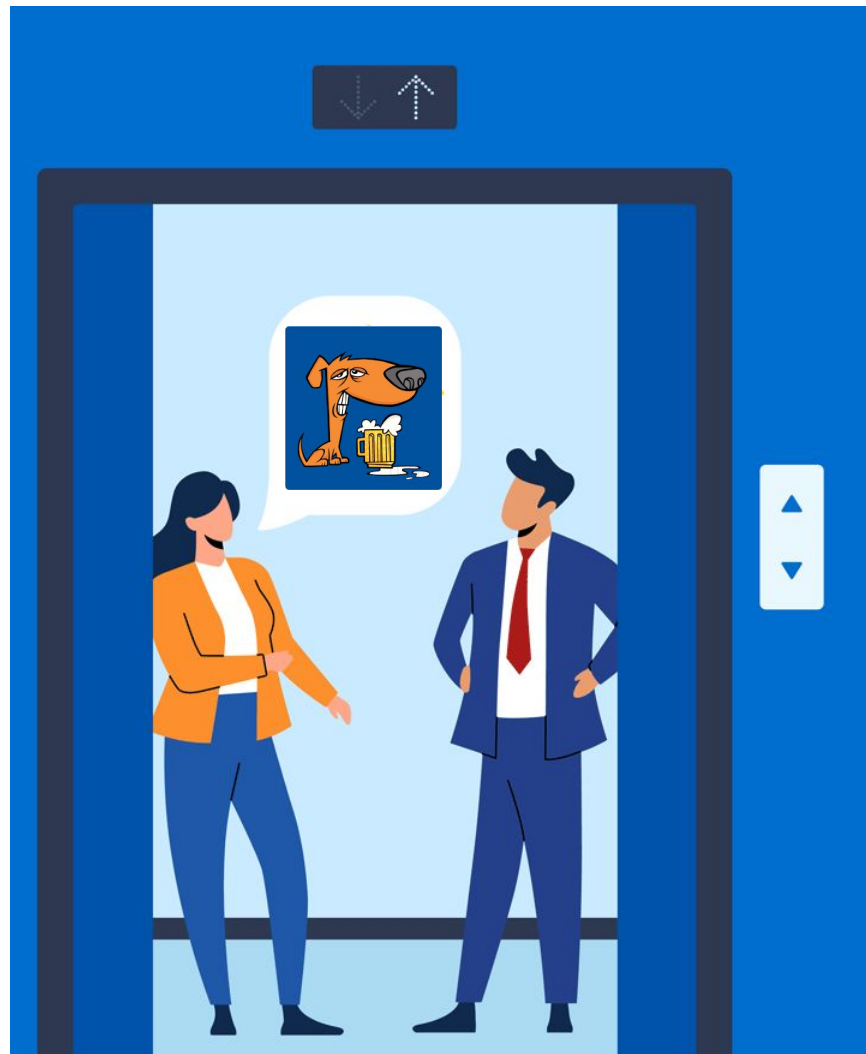

# Elevator Pitch

What is Booze Hound?

Joseph

# Concept

## User Story:

AS A person that wants to easily discover new bars in any given location,

I WANT to be able to enter a city into a search field to surface information about the bars located in that city such as the name, address, and website,

SO THAT I can make better informed decisions when ultimately deciding which establishment to patronize.

Xavier

# Process

## Technologies Used:

- HTML, JS, CSS, MaterializeCSS;
- 1st server-side API: Open Brewery DB (<https://www.openbrewerydb.org/>);
- 2nd server-side API: Leaflet (<https://leafletjs.com/>);

## What challenge did we encounter?

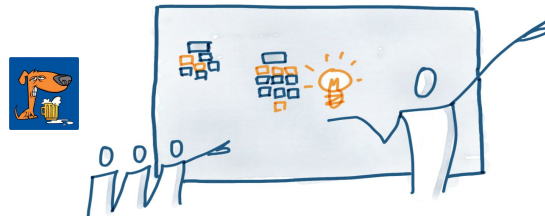

- One key challenge we encountered was having to merge two API calls together into one code.

## What were our successes?

- ★ With the help of the instructional team and each other we made success;

We made the above-mentioned two APIs work together and LeafLet map displayed Brewery search results.

Next comes the Demo, please!

# Demo

Rances / JR

## Planned for Version 2

1. Adding dropdown for US states.
